

Website & Dashboard Modifications:

This modification document contains modification of main website, Dashboard, mobile app (IOS & Android) and code modification.

- 1) The page number will be like below (in all pages of dashboard):

<input type="checkbox"/>	agnelo@lydiadubai.com	Agnelo Dsouza	20-03-2021	10	0-03-2021
<input type="checkbox"/>	afsudubai@gmail.com	Afsal Manas Otheyoth	20-03-2021	25	0-03-2021
<input type="checkbox"/>	aamrochka@gmail.com	Rivaarch	20-03-2021	50	0-03-2021
<input type="checkbox"/>	aamir@traveltag.net	Syed Mehmood	20-03-2021	100	0-03-2021
				200	

Go to: of 2

Show Rows: 50

Only the page filter is done – The left below corner go to page is not done & In video while you selecting Number 10 it is showing 13 results.

- 2) For all the contact details Last 3 menus – need a download in excel sheet with date and download as per filtered date

Explanation : In the Dashboard, the last 3 menus called Contact Website, Subscription and Contact landing page – we need to add the date column on the table and need a date filter on the top right corner & export into excel sheet as per the filter

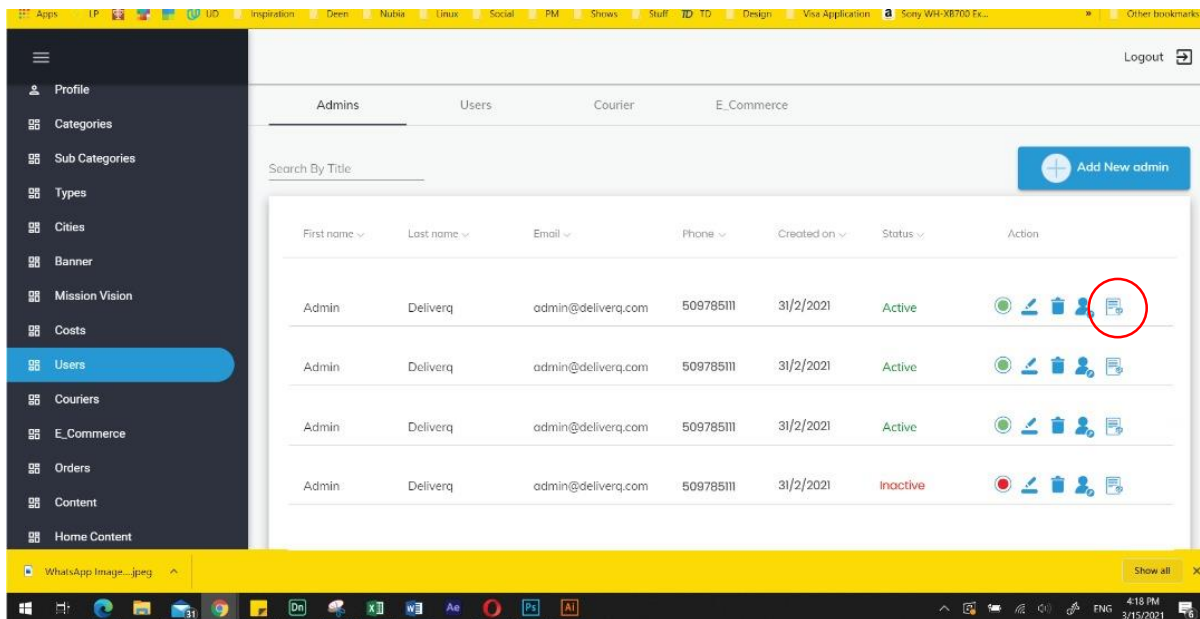

- 3) Courier profile need to add a column preferred Delivery Location with priority 1 to 7 – which will help in automation process.

Explanation: This is related to automation process, This is explained on the Automation process.

- 4) Password change is not working for Master admin from the dashboard itself

- 5) Add user column from the dashboard – after creating same like courier companies the user should also receive the password over the mail.

Explanation: In the dashboard, there is an option to create Admin, Courier, E-Commerce and User. If you create or add courier the register a courier company the registered email id will receive the mail with password and username. We need to same option for user as well.

We need action buttons like above example, this way will sort more rows on the same page.
and we need filter option on all the pages.

Explanation: This is already implemented by the old developer but we need just same like mentioned in the above screenshot and functional.

** The Icon on highlighted on RED is shipment list, it should show all shipments created by the specific user. (for any account that is created whether its individual or any other)

Filter should be ascending and descending order (All the tables on the Dashboard)

The Icons mentioned on the images should be the same for all the page such as admin, Users, couriers, Orders, E-commerce, etc..

Explanation: We need the same icons to be used as mentioned on the screenshot above

All the created should come real time not past date or future date.

Explanation: Earlier, the order will give the different date and time, I hope it is fixed by the previous team.

The orders menu should be the same as below:

Tracking No	Username	Courier	Driver	Delivery Type	Cost	Total	Status	Order Timing	Action
2128590000000074	Sankar S	Moha Cour	Bike	Next Day Delivery (13)	80	93	Pending	2021/02/28 03:56 PM	<div>Details</div> <div>Logs</div> <div>Assign to company</div>

Explanation: We need a drop down status with all the options related to order such as pending, assigned, On the way, Delivered etc...

E-commerce Dashboard:

Company	Owner	Delivery	Transit	Status	Action
Al Tag company	altag ecommerce	altag	altag	Active	<div>Edit</div> <div>active</div> <div>Details</div>

User account:

First name	Last name	Email	Phone	Status	Action
Muhammad	Shafee	geeksera.online1@gmail.com	+971509763142	Active	<div>Inactive</div> <div>Shipments</div> <div>Delete</div>

Explanation: We need a shipments button in the user accounts page

In the above shipment page – the shipment details mentioned below particular user account:

Tracking No	User Name	Courier	Category	Delivery Way	Cost	Total	Status	Order Timing	Action
2128490000000000	Sankar S	Courier Company	Bike	Next Day Delivery (13)	50	63	On Way	2021/01/28 03:12 PM	<div>Details</div> <div>Logs</div>

Explanation: In the dashboard, we need a shipment button and if you click the shipment button, the only shipment belongs the particular user account should visible there. Same the second screenshot. All these this should have the Icons (as mentioned 6 – all the page should have similar icons not the button with word)

Costs:

Shipment Information

Explanation: As I mentioned earlier, we have 4 kind of users and this particular e-commerce account will be created on the super admin dashboard, once after creating the account the e-commerce registered mail id will receive the login details. Once after the login there is a new shipment, Now its showing same like screenshot but we don't need that option – it should be default same the the user account- once the account is created for all the shipment the username, email and phone number will be the same.

Frontend website (Main website and E-commerce Dashboard):

Payment category: prepaid – COD, If COD amount box to mention the amount of the collection. – This information should come along with the shipment details -

The screenshot shows a web form for creating a shipment. It is divided into two main sections: 'Parcel Categories' and 'Payment Method'.

Parcel Categories: This section contains three columns of category options, each with a weight limit and an expandable arrow.

- Bike (Up To 4 KG ^):** Includes 'Document' and 'Other' (with a question mark icon).
- Car (Up To 10 KG ^):** Includes 'Parcel', 'Electronic', and 'Other' (with a question mark icon).
- Carrier (Up To 100 KG ^):** Includes 'Electronic' and 'Other' (with a question mark icon).

Payment Method: This section includes a note: "Please mention whether the parcel cost & delivery cost are paid or need to be collected by the delivery company".

It has two sub-sections:

- Parcel/Product Payment:** Radio buttons for 'Prepaid' and 'COD'. The 'COD' option is selected, and a text box below it contains '150 AED'.
- Delivery Payment:** Radio buttons for 'Prepaid' and 'COD'.

At the bottom, there is a 'TOTAL WEIGHT (OPTIONAL)' section with a weight input field (currently empty), a unit selector set to 'KG', and a 'Calculate' button.

Explanation: In Front end website, In the new shipment page we need the same like the above screenshot – If you are creating the new layout but still we need this payment method to be mentioned there. And if they mention any amount on COD this should be shown on the shipment details to courier company request.

Automations

1) New shipment comes to the shipment – New tracking ID will be created and order accept link will be send as SMS & email to the Delivery Company as per the preferred Location(point no 1).

Explanation: This is our automation process, if any customer or E-commerce initiate the delivery immediately the system will generate the SMS & Email will send to the courier company with all the details about the parcel but here we need our system to send this request as per the preferred location of the courier company.

2) If they click the link, Its will take them to the courier companies dashboard with Delivery Details pick up & Drop location, Category, timer (5 min) and Accept & Reject button.

3) If they click the accept – the notification will send the shipment person on app and website like your shipment will be processed shortly. From the courier dashboard they can assign the order to their driver and He can manage the pickup and status update from the app.

4) If they rejects the order or exceed to accept the order within 5 min, the system will send the particular order to other company and If accept (Point 2 of automation will happen) if not same process will repeat sending to different courier company.

Now what we required is, the SMS and mail should go to the courier company as per the preferred location or once the courier company receive one request and accept the order the particular courier company should go last on the cycle of sending SMS and Mail

FYI, we are using Twilio for the SMS service.

Required API:

We need an API or featured add our window in our Client E-commerce website for them to assign the order to us and through their system from our window

Once they assign any order, our actual process of order deliver will start.

We need to have a check box for them to select the orders and assign to DeliverQ and once after the assignment our new tracking id should start and continue the same process.

Accounts:

Customer/E-commerce Name	Courier Company	Tracking ID	Delivery Date	Delivery Type	Delivery Charge	Status	Details
ABC Company	Topex Delivery	100000020001	03/01/2020	Next Day	13	Completed	See Details
ABC Company	Topex Delivery	100000020023	03/01/2019	Same Day	25	Completed	See Details
ABC Company	Topex Delivery	100000020044	22/05/2020	Same Day	25	Completed	See Details
ABC Company	Topex Delivery	100000020554	22/05/2020	Next Day	13	Completed	See Details
ABC Company	Topex Delivery	100000020665	22/05/2020	Next Day	13	Completed	See Details
ABC Company	Topex Delivery	100000020623	22/05/2020	Next Day	13	Completed	See Details
ABC Company	Topex Delivery	100000020333	22/05/2020	Two Hours	99	Completed	See Details
Total					201		

Courier Accounts:

Combination of account will be user account/E-commerce accounts and Courier accounts.

E-commerce Accounts:

Combination of account will be user account and Courier accounts.

Must have a date filter with date filter on the top of the page and also.

Explanation: This is the feature, we which is not there on the dashboard, this accounts dashboard should have all the accounts of the delivery details. The delivery charges should come from the category of the shipment. We need exactly the same dashboard and with link to the other page (The underlined word are the links) This should be there for all the user accounts like user account, E-commerce and courier companies. This account is common and important.

S.NO	Name	Courier name
------	------	--------------

Need the same filter in all the dashboard tables page such as couriers, orders, e-commerce, contacts etc...

Prices

Type of Delivery	Price Per Order
Two Hours delivery	99 ^{AED}
Same day delivery	
Same Emirate	25 ^{AED}
Northern Emirates to other Emirates *	28 ^{AED}
Next day delivery	
Same Emirate	13 ^{AED}
Northern Emirates to other Emirates *	23 ^{AED}
Remote Areas (250 to 450 including western area)	80 ^{AED}
Boarder of UAE with Oman (Baimi, Khasab and other coastal areas)	100 ^{AED}
Madha Provision	200 ^{AED}

** Remarks :

- North Emirate : Dubai, Sharjah and Ajman .
- Other Emirates : Abu Dhabi & Alain, Fujairah, Ras Alkhaima and Umm Al-Quwain .

** 1 Order = Each is up to 10 KG maximum

We need to mention to make this cost as the main cost in the front end main website in the calculator and new shipment instead of the current cost structure.

Mobile App(Both IOS and Android) :

Tracking should resemble same like the website.

Driver should have access to upload the photo by camera of the emirates ID or Passport.

User account – Should have all the menu same like website including the accounts.

Explanation: If you change the menus on the user account, It should also to changed or edited on the mobile app for user account such as accounts.
